

Initiative	Wi-Fi Public Internet Access
Description	Partner with a company to provide wireless public internet access at state properties to visitors with laptops and other portable wireless devices. This will permit visitors to state properties to connect to the internet to conduct business and access information. The state will also maintain control of a splash page which can be used to display important information regarding the property being visited, or other information the State deems necessary to display on it.
Support of goal(s)	<ol style="list-style-type: none"> 1. Citizen Service: Allows citizens to get online and access the internet and their email and conduct business while at state properties. 2. Common Solutions: Wireless connectivity to be provided by a company actively deploying throughout the state. 3. Communication: State can communicate important information to visitors and citizens via a “Splash page” when they access the Wi-Fi sites. 4. Customer Service: DoIT can provide the supporting contract for our customer agencies as they implement this service to the public. DoIT can also collect and analyze usage and quality data that will help determine future state initiatives in this area.
